ABSTRACT

The article examines the impact of analytical chemistry on antimalarial drugs and investigates the potential of using herbal remedies to treat the disease. Single chemical entity drugs began 200 years ago, leading many researchers to believe that the effectiveness of multi-component remedies. Studies indicate that single chemical drugs have a toxicity level which is 1,000 to 10,000 times greater than medicinal plants. The article suggests more synergy between methods of traditional medicine and modern pharmaceutical practices.
