### Cannabinoid Analysis

**FOR INFORMATIONAL USE ONLY - NOT FOR REGULATORY PURPOSES**

Date/Time Extracted: 11/09/18 11:48

Analysis Method/SOP: SOP.T.40.020

Date/Time Analyzed: 11/09/18 18:55

Cannabinoids	LOQ(%)	mg/g	% weight	Cannabinoids Profile
<b>Total THC</b> ((THCA*0.877)+Δ9THC)		<b>0.193</b>	<b>0.0193</b>	
<b>Total CBD</b> ((CBDA*0.877)+CBD)		<b>8.342</b>	<b>0.8342</b>	

THCA	0.0100	< LOQ	< LOQ
delta 9-THC	0.0100	0.148	0.0148
delta 8-THC	0.0100	< LOQ	< LOQ
CBDA	0.0100	0.436	0.0436
CBD	0.0100	7.96	0.7960
CBN	0.0100	< LOQ	< LOQ
CBG	0.0100	2.27	0.2270
CBC	0.0100	0.328	0.0328
Sum of tested Cannabinoids	0.0100	11.13	1.113

"Total THC" and "Total CBD" are calculated values and are an Oregon reporting requirement (OAR 333-064-0100). For Cannabinoid analysis, only delta 9-THC, THCA, CBD, CBDA are ORELAP accredited analytes. Cannabinoid values reported for plant matter are dry weight corrected; Oregon Water Activity action level is 0.65Aw; Samples above limit will be highlighted **RED**; FD = Field Duplicate; LOQ = Limit of Quantitation.

## Yeast and Mold Enumeration

Date/Time Extracted: 11/09/18 09:26

Analysis Method/SOP: SOP.T.40.040

Date/Time Analyzed: 11/12/18 09:00

Total Colonies: 0.00 CFU/g

### About Your Yeast and Mold Results

Botanical materials often have total yeast and mold counts between 1,500 - 7,500 CFU/g. Products that have undergone exposure to solvents, such as alcohol tinctures or concentrated materials extracted with butane, propane, hexane, carbon dioxide, or other organic solvents will typically feature total yeast and mold counts at 0 CFU/g.

The American Herbal Pharmacopoeia recommends herbal products contain no greater than 10,000 CFU/g of total yeasts and molds. Results above 10,000 CFU/g will be highlighted **Red**.

### Yeasts vs Molds

Yeasts and molds are both broad types of fungi. Yeasts are unicellular and reproduce by budding, creating a small smooth appearance, whereas molds are multicellular and grow through fungal strands called hyphae, creating a fuzzy appearance often associated with mold.

Yeasts and molds are commonly found on natural products, and not all are harmful. Nevertheless, yeasts and molds, as well as their spores, can cause lung irritation, facilitate allergic reactions, or even present life-threatening conditions for immuno-compromised consumers. For instance, the dark mold, *Aspergillus*, can produce toxic chemical byproducts which can be harmful to human health. *Aspergillus* spores can lodge in small crevices in the lungs and grow, leading to a potentially life-threatening condition called Aspergillosis.

A simple total yeast and mold count can be a great way to monitor for potential health hazards in botanical products and help ensure the safety of consumers.

## Aerobic Plate Count

Date/Time Extracted: 11/19/18 16:32

Analysis Method/SOP: \*\*\* DEFAULT  
SPECIFIC

Date/Time Analyzed: 11/21/18 16:06

**Total Colonies: 0.00 CFU/g**

### About Your Aerobic Plate Count (APC) Results

An aerobic plate count is a measure of the amount of bacteria in a sample that is capable of living in an oxygenated environment.

The American Herbal Pharmacopoeia recommends herbal products contain no greater than 100,000 CFU/g of total viable aerobic bacteria. For CO<sub>2</sub> and solvent based extracts, the AHP recommends a limit of no greater than 10,000 CFU/g.

Aerobic plate count is commonly applied to finish products, particularly foods. Traditionally manufacturers will monitor products for aerobic bacteria on a routine basis to ensure that the microbial load of a product is not increasing.
